

Duraline **Heavy Duty Handlights Without Switch**

Duraline has been manufacturing quality handlights for over 50 years. Each handlight is integrally molded to solid HYPALON. Handlights are also ruggedly constructed and integrally molded to type SOOW (600 volt) cable. 2 wire or 3 wire configurations are available.

The handlight's molded socket incorporates a rubber "O" ring seal that forms a watertight seal, around the neck of the bulb, to prevent water and other foreign objects from entering the socket.

Units can be supplied with IP68 rated connectors or standard NEMA connectors. Incandescent or fluorescent "screw-in" lamps can be used. (100-watt max.. medium base) Duraline can mold or assemble a variety of connector terminations to handlight assemblies at the customer's request.

The hand lights may be protected by one of two available heavy-duty guards (optional). You may choose from either a red vinyl coated steel guard or a crushproof clear lexan guard.

Duraline's 2 wire and 3 wire handlights, are your best choice for durable, long- lasting, reusable lighting in indoor/outdoor environments.

Duraline Lighting Systems exceed O.S.H.A. requirements and are suitable for IEC Class IP68 and NEMA Class 6 applications.
